

Set up notifications in three steps

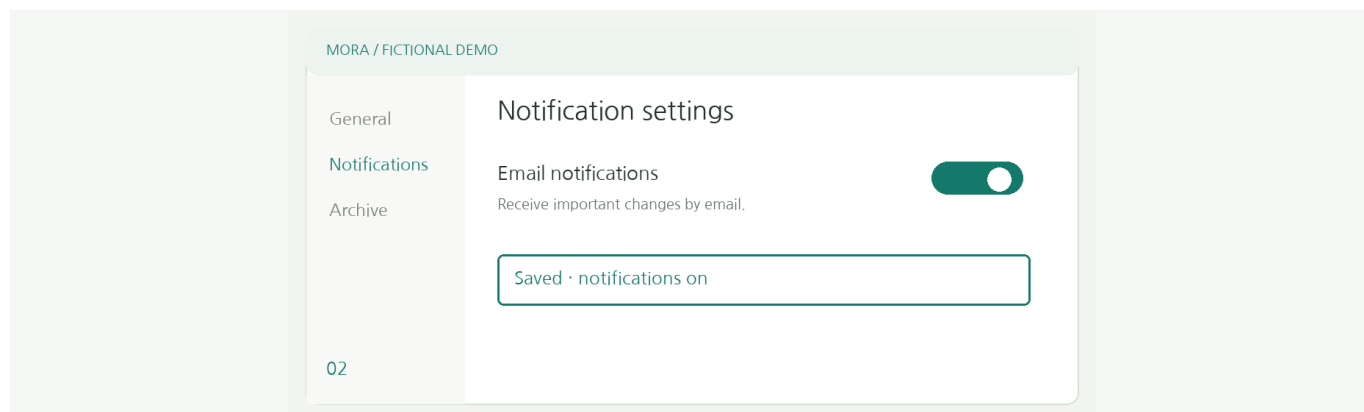

A worked guide using original fictional screens. Each step pairs an action with an observable result.

01 Choose Notifications in Settings

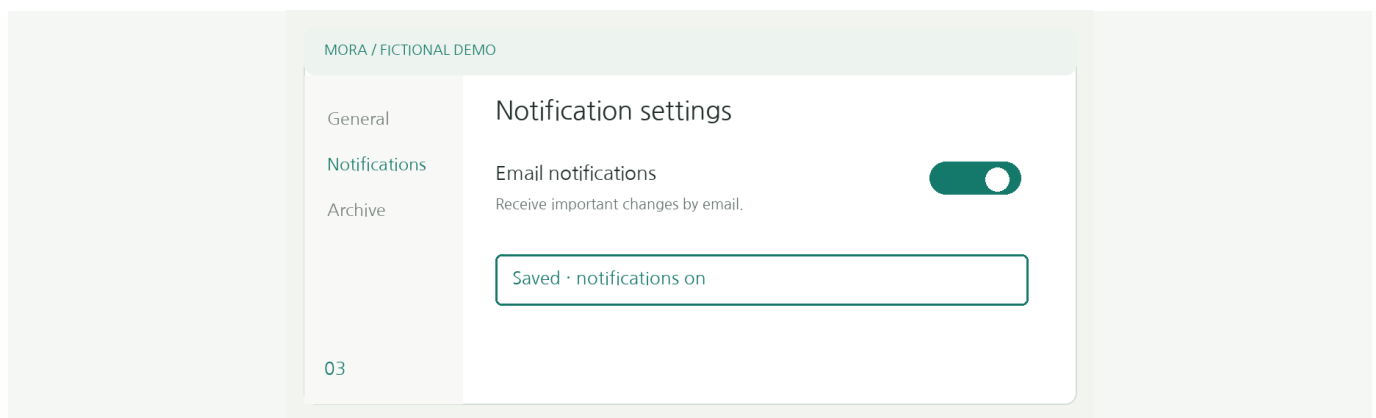

Select Notifications in the left menu. Confirm the heading changes to Notification settings.

02 Turn on email notifications

Enable the Email notifications switch and select Save. Check both the On state and the confirmation message.

03 Reopen settings to verify

Navigate away and reopen Settings. If notifications remain on, the task is complete. Remove private information from screenshots before sharing.
